

2. Updated Database Design (Important Fix)

1. courses

id
name -- BCA, BBA etc

2. batches

id
course_id (FK)
year -- 1st, 2nd, 3rd
batch_name -- Morning / Evening

3. subjects

id
course_id (FK)
year
name -- C Programming, Math
fee -- fee per subject

4. students

id
name
phone
email
batch_id (FK)
join_date

5. student_subjects (VERY IMPORTANT TABLE)

This handles:

 "some student may not study all subjects"

id
student_id (FK)
subject_id (FK)

 This is called:

Many-to-Many relationship

6. payments

id
student_id (FK)
amount
payment_date
month_for

3. Relationships (Understand this deeply)

- One Course → many Batches
 - One Batch → many Students
 - One Course → many Subjects
 - One Student → many Subjects (via student_subjects)
 - One Student → many Payments
-
